STRUCTURAL INTERIOR DESIGN (SID)
OBJECTIVES NARRATIVE

The objective of a functional, aesthetically pleasing, and value centered facility provided the basis for interior finish material selections. Specified and illustrated products, all suited for commercial application, answer not only the main priority of appearance retention but also will meet or exceed project requirements of durability, ease of maintenance, and visual appeal. Sustainable characteristics and/or recycled content were paramount considerations in developing the interior finish package.

Four color scheme options have been developed. The requirement for the selection of the interior materials within each scheme was that they provide a completely neutral envelope upon which any number of themes could be showcased. This concept will allow the environment's aesthetics to be timeless while providing the opportunity to re-evaluate and modify the theme and personality of the space when needed or desired. Colors/finishes were distributed in such a way as to represent an essentially neutral scheme, but pattern, texture and the correct mix of selected colors raise the level of quality and style representative of the building's function and it population.

In conclusion, the interior environment will compliment the building's architectural style, constitute a positive and comfortable dining environment, and provide long-term value and performance for all occupants. This binder contains the schedules, samples, and documentation of one of the four interior finish schemes for this 100% submittal.
